Suru icon theme for wxPython

This package provides a wxPython wxArtProvider class with icons from the Suru Icon Theme.

| |
|--------------------------|
| Docs |
| Tests |
| PyPI |
| Activity |
| Other |

INSTALLATION

```
from PyPI
from GitHub
$ python3 -m pip install wx_icons_suru --user
$ python3 -m pip install git+https://github.com/domdfcoding/custom_wx_icons_suru@master --user
```

1.1 Usage

To use `wx_icons_suru` in your application:

```
from wx_icons_suru import wxSuruIconTheme

class MyApp(wx.App):
    def OnInit(self):
        wx.ArtProvider.Push(wxSuruIconTheme())
        self.frame = TestFrame(None, wx.ID_ANY)
        self.SetTopWindow(self.frame)
        self.frame.Show()
        return True
```

And then the icons can be accessed through `wx.ArtProvider`:

```
wx.ArtProvider.GetBitmap('document-new', wx.ART_OTHER, wx.Size(48, 48))
```

Any FreeDesktop Icon Theme Specification name can be used.

Currently the *Client ID* is not used, so just pass `wx.ART_OTHER`.

1.2 API Reference

```
class wx_icons_humanity.HumanityDarkIconTheme(name, comment, directories, inherits=None, scaled_directories=None, hidden=False, example='')

classmethod create()
    Create an instance of the Humanity Dark Icon Theme

find_icon(icon_name, size, scale, prefer_this_theme=True)

Parameters
```

- **icon_name** –
- **size** –
- **scale** –
- **prefer_this_theme** – Return an icon from this theme even if it has to be resized, rather than a correctly sized icon from the parent theme. Default `True`.

Returns**Return type**

```
classmethod from_configparser(theme_index_path)
```

Constructs a `IconTheme` from config file.

Parameters `theme_index_path` (`Union[str, PathLike]`) –

Return type `IconTheme`

inherits: `List[str]`

scaled_directories: `List[wx_icons_hicolor.directory.Directory]`

```
class wx_icons_humanity.HumanityIconTheme(name, comment, directories, inherits=None,
                                           scaled_directories=None, hidden=False, example='')
```

classmethod create()

Create an instance of the Humanity Icon Theme

```
find_icon(icon_name, size, scale, prefer_this_theme=True)
```

Parameters

- **icon_name** (`str`) –
- **size** (`int`) –
- **scale** (`Any`) –
- **prefer_this_theme** (`bool`) – Return an icon from this theme even if it has to be resized, rather than a correctly sized icon from the parent theme. Default `True`.

Returns**Return type**

```
classmethod from_configparser(theme_index_path)
```

Constructs a `IconTheme` from config file.

Parameters `theme_index_path` (`Union[str, PathLike]`) –

Return type `IconTheme`

inherits: `List[str]`

scaled_directories: `List[wx_icons_hicolor.directory.Directory]`

```
wx_icons_humanity.version()
```

```
class wx_icons_humanity.wxHumanityDarkIconTheme
```

CreateBitmap (`id, client, size`)

Returns the requested resource.

Parameters

- **id** – Unique identifier of the bitmap.
- **client** – Identifier of the client (i.e. who is asking for the bitmap). This only serves as a hint.
- **size** – Preferred size of the bitmap. The function may return a bitmap of different dimensions; it will be automatically rescaled to meet client's request.

static HasNativeProvider()

Return type `bool`

static icon2bitmap(icon, size)

Converts an `Icon` to a `wx.Bitmap`.

Parameters

- **icon** (`Icon`) –
- **size** (`int`) – The desired size of the icon. If the icon isn't scalable the icon is returned in its original size.

Return type `Bitmap`

class wx_icons_humanity.wxHumanityIconTheme

CreateBitmap(id, client, size)

Returns the requested resource.

Parameters

- **id** (`Any`) – Unique identifier of the bitmap.
- **client** (`Any`) – Identifier of the client (i.e. who is asking for the bitmap). This only serves as a hint.
- **size** (`Union[Tuple[int], Size]`) – Preferred size of the bitmap. The function may return a bitmap of different dimensions; it will be automatically rescaled to meet client's request.

Return type `Bitmap`

static HasNativeProvider()

Return type `bool`

static icon2bitmap(icon, size)

Converts an `Icon` to a `wx.Bitmap`.

Parameters

- **icon** (`Icon`) –
- **size** (`int`) – The desired size of the icon. If the icon isn't scalable the icon is returned in its original size.

Return type `Bitmap`

1.3 Contributing

`wx_icons_suru` uses `tox` to automate testing and packaging, and `pre-commit` to maintain code quality.

Install `pre-commit` with `pip` and install the git hook:

```
$ python -m pip install pre-commit  
$ pre-commit install
```

1.3.1 Coding style

`Yapf` is used for code formatting, and `isort` is used to sort imports.

`yapf` and `isort` can be run manually via `pre-commit`:

```
$ pre-commit run yapf -a  
$ pre-commit run isort -a
```

The complete autoformatting suite can be run with `pre-commit`:

```
$ pre-commit run -a
```

1.3.2 Automated tests

Tests are run with `tox` and `pytest`. To run tests for a specific Python version, such as Python 3.6, run:

```
$ tox -e py36
```

To run tests for all Python versions, simply run:

```
$ tox
```

1.3.3 Type Annotations

Type annotations are checked using `mypy`. Run `mypy` using `tox`:

```
$ tox -e mypy
```

1.3.4 Build documentation locally

The documentation is powered by Sphinx. A local copy of the documentation can be built with `tox`:

```
$ tox -e docs
```

1.4 Downloading source code

The `wx_icons_suru` source code is available on GitHub, and can be accessed from the following URL: https://github.com/domdfcoding/custom_wx_icons_suru

If you have `git` installed, you can clone the repository with the following command:

```
$ git clone https://github.com/domdfcoding/custom_wx_icons_suru"
> Cloning into 'custom_wx_icons_suru'...
> remote: Enumerating objects: 47, done.
> remote: Counting objects: 100% (47/47), done.
> remote: Compressing objects: 100% (41/41), done.
> remote: Total 173 (delta 16), reused 17 (delta 6), pack-reused 126
> Receiving objects: 100% (173/173), 126.56 KiB | 678.00 KiB/s, done.
> Resolving deltas: 100% (66/66), done.
```

Alternatively, the code can be downloaded in a ‘zip’ file by clicking:

Clone or download → *Download Zip*

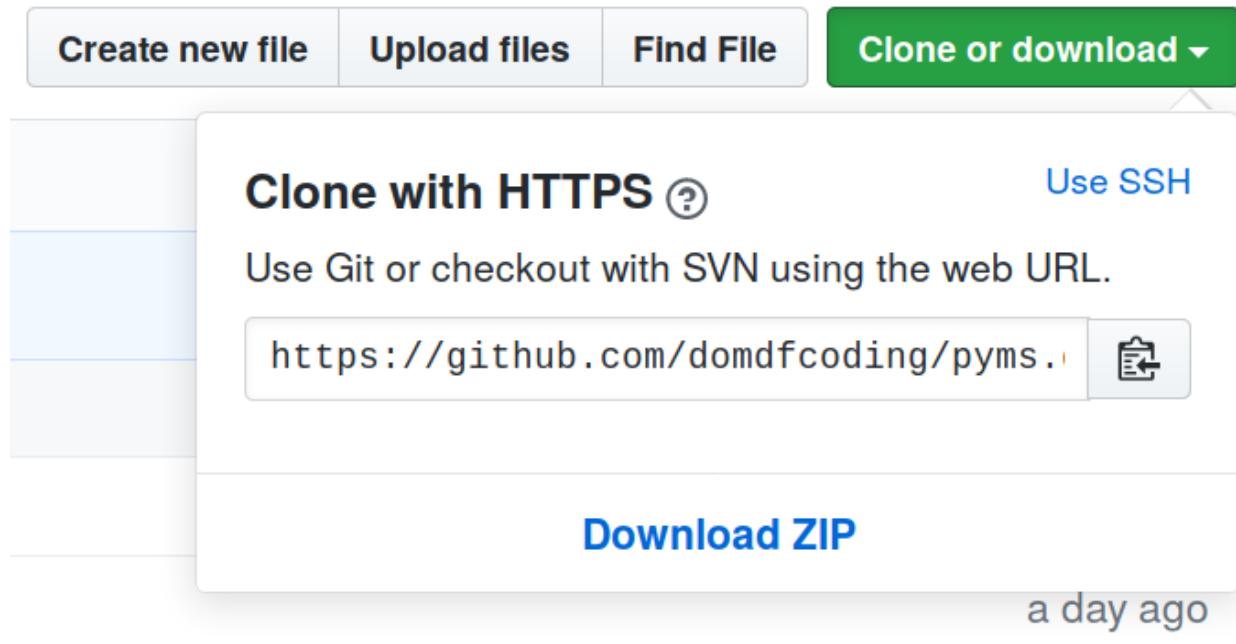

Fig. 1: Downloading a ‘zip’ file of the source code

1.4.1 Building from source

The recommended way to build `wx_icons_suru` is to use `tox`:

```
$ tox -e build
```

The source and wheel distributions will be in the directory `dist`.

If you wish, you may also use `pep517.build` or another **PEP 517**-compatible build tool.
